Goethals. AN ALGEBRAIC APPROACH TO THE ASSOCIATION SCHEMES OF CODING ... An association scheme is, roughly speaking, a collection of graphs on a common vertex set which fit together in a highly regular fashion. These arise regularly in connection with extremal structures: such structures often have an unexpected degree of regularity and, because of this, often give rise to an association scheme. To qualify under section 501(a) of the Code, the association must have a written document, such as articles of association, showing its creation. At least two persons must sign the document, which must be dated. Definition of an Association | Internal Revenue Service This paper contains the bases of an algebraic theory of certain association schemes, called polynomial schemes. Special emphasis is put on concepts arising from the theories of error correcting codes and of combinatorial designs. The main goal is to provide a general framework in which various
