describe, analyze, simulate, and verify their multidomain systems using a combination of modeling approaches and levels of abstraction. Domain examples are analog, digital, RF, software, and thermal; and abstraction can vary from transistor level up to algorithm level. Semiconductors - MATLAB & Simulink Abstract Modeling of manufacturing processes plays a key role in analysis and design of semiconductor supply chain networks. As the scale and subsequently complexity of a supply chain network grows, the characterization of its process model which consists of physical elements (e.g., assembly test and semi-finished goods) becomes highly important.
