treats ways to analyze,

systematically extract information from, or otherwise deal with data sets that are too large or complex to be dealt with by traditional data-processing application software. Data with many cases (rows) offer greater statistical power, while data with higher complexity (more attributes or columns) may lead to a higher false discovery rate. Big data -
Wikipedia All this big data is a gold mine - but only if you can take advantage of it. For infrastructure and specifically application delivery systems that means somehow being able to access data relevant to an individual user from a variety of sources and applying some operational logic to determine, say, level of access or permission to
