It is clear from the previous discussion that caffeine and theophylline can affect practically all parts of the cardiovascular system--directly or indirectly. Whether they will and how significant the effect is likely to be is more uncertain. Cardiovascular and renal actions of methylxanthines. Since the separation and identification of many different naturally occurring prostaglandins, the cardiovascular actions of these compounds have been investigated in many species. From these studies it has become evident that there are marked qualitative as well as quantitative differences in response between species as well as between various ... Cardiovascular and Renal Actions of Prostaglandins ... Abstract— This study was designed to determine the role of changes in adrenergic activity in mediating the chronic cardiovascular, renal, and metabolic actions of leptin. Male Sprague-Dawley rats were implanted with catheters for mean arterial pressure (MAP) and heart rate (HR) measurements and IV infusions of either vehicle (n= 7) or α - and β -adrenergic receptor antagonists, terazosin and ...
