the temporomandibular disorder (TMD) and orofacial pain field, this comprehensive and clinically oriented book presents current and emerging evidence-based research on TMDs.

### **26.2 Current Concepts of Orthopaedic**

Current Treatment Concepts TMDs are generally considered to have a multifactorial etiology. Predisposing and perpetuating factors include stress, trauma, systemic disease, and occlusal problems. The multiplicity of causes is supported by clinical approaches that have tended to combine treatments to gain a more effective outcome.

### **Current Concepts On Temporomandibular Disorders [EBOOK]**

Abstract. Temporomandibular disorders (TMD) is a collective term for a group of musculoskeletal conditions involving pain and/or dysfunction in the masticatory muscles, temporomandibular joints (TMJ) and associated structures. It is the most common type of non-odontogenic orofacial pain and patients can present with pain affecting the face/head, TMJ and or teeth, limitations in jaw movement, and sounds in the TMJ during jaw movements.
