Energy Physics And The Environment Physics 12: Energy and the Environment. Spring Term, 2013. This course looks at the role that energy plays in our lives. We will first explore the physics of energy in its many forms, learning how to calculate/estimate the energy content of a wide variety of systems. Then we will look at our sources of energy, addressing present and future limitations and crises. Physics 12: Energy and the Environment Physics and the Environment directly connects the physical world to environmental issues that the world is facing today and will face in the future. It shows how the first and second laws of thermodynamics limit the efficiencies of fossil-fuel energy conversions to less than 100%, while also discussing how clever technologies can enhance overall performance.
