Internal Combustion Engine
Fundamentals Solution Fuel is
injected directly into the cylinder
(or into a prechamber which is
connected to the cylinder for
indirect injection engines), just
before (some 5 CAD) the desired
start of combustion. High pressure
injection produces small, high
velocity fuel droplets which
vaporize rapidly in the
sprays. Solutions Manual to

... In an internal combustion engine, the expansion of the high-temperature and high-pressure gases produced by combustion applies direct force to some component of the engine. The force is applied typically to pistons, turbine blades, rotor or a nozzle.

This force moves the component over a distance, transforming chemical energy into useful work. Internal combustion engine -
