... Laser surgery is a type of surgery that uses special light beams instead of instruments for surgical procedures. LASER stands for "Light Amplification by the Stimulated Emission of Radiation." Lasers were first developed in 1960. Newer laser modifications continue to have a large impact on medical and surgical practices. What Is Laser Surgery? | Stanford Health Care Get this from a library! Lasers in Surgery : Advanced Characterization, Therapeutics, and Systems V.. [R Rox Anderson] Lasers in Surgery : Advanced Characterization ... Lasers in Surgery and Medicine publishes the highest quality research and clinical

manuscripts in areas relating to the use of lasers in medicine and biology. The journal publishes basic and clinical studies on the therapeutic and diagnostic use of lasers in all the surgical and medical specialties. Lasers in Surgery and Medicine - Wiley Online Library Laser surgery is a type of surgery that uses a laser to cut tissue. Examples include the use of a laser scalpel in otherwise conventional surgery, and soft-tissue laser surgery, in which the laser beam vaporizes soft tissue with high water content. Laser surgery is commonly used on the eye. Techniques used include LASIK, which is used to correct near and far-sightedness in vision, and photorefractive keratectomy, a procedure which permanently reshapes the cornea using an excimer
