Mulders Chart Nutrient Interaction In the soil, nutrients interact with one another leading to changes in availability to plants. The figure below (Mulder's Chart) displays the various interactions that can occur.

Antagonism: High levels of a particular nutrient in the soil can interfere with the availability and uptake of other nutrients. For example, Mulder's Chart: Nutrient Interactions - NutriAg Group Mulder's Chart shows some of the interactions between plant nutrients. High levels of a particular nutrient in the soil can interfere with the availability and uptake by the plant of other nutrients. Mulder's Chart of Plant Nutrient Interactions

... This is why too much or too little of certain minerals in the soil may interfere with nutrient availability. This is where Mulder's Chart comes in. How to use Mulder's Chart Looking at Mulder's Chart, you can see 11 essential plant nutrients and micronutrients arranged around a circle. Solid and dotted lines connect the nutrients, with arrows heading one way or the other. Mulder's Chart - The Daily Garden If we look at a Mulder's Chart, we will see that over application of nitrogen will reduce the plants ability to uptake potash, boron and copper. If you do make the application of N, be sure to address the plants need for the other nutrients. [CLICK HERE](#) to VIEW a Mulder's Chart, one is available on our website. What is a Mulders Chart? -

CultivAce Growth The Mulder's Chart shows how elements interact. The dotted lines show which elements enhance each other. The solid lines show which elements antagonize each other. For example, calcium can cause a magnesium deficiency, while nitrogen can solve this deficiency. Interactions between nutrients - CANNA CANADA Mulder's chart (PLANT NUTRIENT INTERACTIONS) allows us to see the how nutrients in the soil can influence the availability and uptake of each other. Antagonism Mulder's Chart shows some of the interactions between plant nutrients. High levels of a particular nutrient in the soil can interfere with the availability and uptake Mulder's Chart (Nutrient Wheel) | Facebook In 1953, D. Mulder

published his “Les elements mineurs en culture fruitière”, one of the first studies of how different nutrients interact. The study included a graph, which is now commonly used. Over the years, other researchers have added other possible synergies and antagonisms. Interactions between nutrients - CANNA UK Again, as with an antagonism, the result is an imbalanced nutrient supply causing deficiencies in the growing crop. Mulder’s Chart, shown below, demonstrates just how complex all these soil nutrient interactions can be, and how a comprehensive soil analysis has the greatest potential to reveal hidden nutrient issues. Understanding Soil Nutrient Interactions The thicker the bar the more available the

nutrient. A lesser known but equally important interaction is the one shown by the Mulder's Chart (Figure 2). The Mulder's chart represents the interaction between 11 of the essential plant elements. Some interactions are positive (synergistic) and others are negative (antagonistic). More reasons for soil testing - MSU Extension Mulder's Chart (above) helps to simplify understanding the interactions between plant nutrients. Some elements work in synergy. They stimulate the uptake of other elements and increase their availability while some elements are 'antagonistic'. They interfere with the uptake or availability of other nutrients. Plant Nutrient Interactions | Hydroponics THE MINERAL WHEEL The

mineral wheel illustration is a very useful visualization of the complexity of soil-mineral relationships first promoted by Mulder in 1953. It is a diagram showing how the levels of soluble/interactive minerals in the soil affect their uptake and utilization by plants. Mineral Wheel - Earthwise Agriculture Above is Mulder's Chart. There are other versions which cover more of the micronutrients but this one covers the essentials. The arrows point to which one is affected, while green means synergy and blue is antagonism. Note: not all lines go both ways. Mulders Chart, Nutrient Synergy and Antagonism ... Mulder's chart (PLANT NUTRIENT INTERACTIONS) allows us to see the how nutrients in the soil can influence the availability and uptake or

each other. Antagonism Mulder's Chart shows some of the interactions between plant nutrients. Mulders Chart of Soil Nutrient Interaction Mulder's Chart Manganese (Mn) Potash (K) Decreased availability of a nutrient to a plant due to the action of another nutrient High level of a nutrient increases the demand by the plant for another nutrient Copper (Cu) Iron (Fe) Phosphate (P) Magnesium (Mg) Molybdenum (Mo) Boron (B) Zinc (Zn) Nitrogen (N) Figure 1. NUTRIENT ANTAGONISM RX The chart below developed by D. Mulder demonstrates the effect that

elements have on nutrient availability. Some nutrients interfere with the availability or uptake of another which is called antagonism. In Mulder's chart, the lines coloured green indicate an antagonistic relationship between each connecting element. The Spark by Beyond Agronomy The most graphic illustration of the interaction of essential elements is called a Mulders Chart (Figure 1). This chart demonstrates the effect that some elements have on the availability of others...
