OpenID Connect is built on a profile of OAuth, and provides additional capabilities in conveying the identity of the user using the application – and not just the application itself. How OAuth 2.0 works A key technical underpinning of the cloud is the Application Programming Interface (API). OAuth 2.0: How It Works | Ping Identity TL;DR: Scopes only come into play in delegation scenarios, and always limit what an app can do on behalf of a user: a scope cannot allow an application to do more than what the user can do. Although stretching scopes

beyond that usage is possible, it isn't trivial or natural – contrary to what common naïve narratives would want you to believe. On The Nature of OAuth2's Scopes There are two most common OAuth 2.0 authorization flows, authorization code flow for server-side applications, and implicit flow for browser-based applications.
